

```

import java.util.*;
class Solution {
    public int lengthOfLongestSubstring(String s) {
        Map<Character, Integer> map = new HashMap<>();
        int left = 0, maxLen = 0;
        for (int right = 0; right < s.length(); right++) {
            char c = s.charAt(right);
            // If character already seen, move left pointer
            if (map.containsKey(c)) {
                left = Math.max(left, map.get(c) + 1);
            }
            // Update character's latest index
            map.put(c, right);
            // Update max length
            maxLen = Math.max(maxLen, right - left + 1);
        }
        return maxLen;
    }
}
