

```

class Solution {
    public int[][] transpose(int[][] matrix) {
        int m = matrix.length;    // number of rows
        int n = matrix[0].length; // number of columns
        int[][] result = new int[n][m]; // transposed matrix

        for (int i = 0; i < m; i++) {
            for (int j = 0; j < n; j++) {
                result[j][i] = matrix[i][j];
            }
        }
        return result;
    }
}

```
